Amaze

Early intervention for young people experiencing symptoms of psychosis

The Amaze service is for young people aged 14–65 experiencing symptoms of psychosis or who are at risk of developing these symptoms.

We offer evidence-based interventions from a team of mental health professionals, including

- nurses
- occupational therapists
- social workers
- psychiatrists
- psychologists

Amaze engages with young people on their own terms, focusing on maintaining social roles and reaching individual goals.

What is psychosis?

These can be some of the early signs of a developing psychosis which can happen to anyone, regardless of age, culture or intelligence:

- feeling suspicious, not trusting people or having paranoid thoughts
- feeling anxious or panicky
- mood changes, e.g. feeling depressed or low
- becoming or feeling isolated and withdrawing from social situations, e.g. not going out or seeing your friends as much
- having problems with relationships, work or school
- perceptual changes, e.g. hearing voices

Approximately 3 people in every 100 will develop psychosis.

Psychosis is treatable – recovery is expected.

Remember we have 10 working days from a suspected psychotic illness to commence treatment to facilitate long term recovery.

Don't be afraid to ask for help for yourself or someone you know.
