

# Information and advice following Cold Coagulation

**Your visit today involved treating an area of your cervix with cold coagulation.**

**What to expect:**

1. You may have a watery discharge following treatment. If you develop a smelly vaginal discharge or pain in your lower abdomen this can indicate infection, please contact your doctor.
2. Period pain may occur for a short time following treatment but it is usually eased by simple painkillers for example, Paracetamol or Ibuprofen.
3. In order to prevent infection and allow healing to occur it is advisable to use pads rather than tampons until the discharge stops. We also advise you shower rather than bath and to avoid sexual intercourse and swimming for four weeks.

**If you have any questions or problems following treatment, please contact the clinic (Direct Line 01228 814263) to speak to one of our members of staff.**
